Customer Journey Map

Map out the customer's experience stage-by-stage, capturing their actions, touchpoints, thoughts, and feelings, along with process ownership and improvement opportunities at each stage.

Phase of Journey	Stage 1: Data Input	Stage 2: Prediction & Analysis	Stage 3: Reporting & Action
Actions (What does the customer do?)	- Enters country indicators manually - Uploads a CSV for batch entry - Reviews input validation messages	- Clicks Predict - Views the HDI score and tier - Explores the sub-index breakdown chart	- Compares multiple countries side-by-side - Exports a PDF / CSV report - Shares findings with the policy team
Touchpoint (What part of the service do they interact with?)	- Web input form - File upload widget - Input validation UI	- Prediction dashboard - ML model backend - Visualization charts	- Export / download button - Report generator - Email / sharing feature
Customer Thought (What is the customer thinking?)	"I hope this accepts my data format" "Are these values correct?" "This is much faster than manual entry"	"Is this prediction reliable?" "Which indicator is weakest?" "This matches what I expected"	"This report will save me hours" "I can act on this immediately" "My team will find this useful"
Customer Feeling (What is the customer feeling?)	- Cautious - Hopeful - Slightly unsure	- Curious - Reassured - Confident	- Satisfied - Empowered - Time-saved

Process Ownership (Who is in the lead on this?)	Data / ML Team	ML Engineer	Product / Reporting Team
Opportunities (How can we improve this stage?)	• Add drag-and-drop CSV upload • Auto-detect column headers • Provide a sample data template	• Add confidence intervals to predictions • Auto-highlight the weakest sub-index • Support real-time model updates	• Enable scheduled report emails • Add custom report branding • Support multi-format exports (PDF/Excel)
