

Empathy Map

Date	28 June 2026
Team ID	
Project Name	A comprehensive measure of well being
Maximum Marks	4 Marks

Empathy Map

Create an empathy map to understand your customer/user from four perspectives - what they Say, Think, Do, and Feel - in relation to the problem your project addresses. This helps the team build a customer-centric solution.

SAYS	THINKS
• "I need to compare countries' HDI quickly without crunching numbers by hand." • "The raw UNDP tables don't tell me which indicator is dragging the score down." "I want a tool that classifies development tier instantly."	• Manual HDI calculation is time-consuming and error-prone. • If I could see sub-index contributions, I could prioritize interventions. • This should work for both single lookups and batch comparisons.
PERSONA: Policy Researcher (HDI Analyst)	
DOES	FEELS
• Downloads HDI indicator data from UNDP / World Bank sources. • Cross-checks life expectancy, schooling, and income data manually. • Uses spreadsheets to estimate the development tier.	• Frustrated by slow, error-prone manual calculations. • Confident when a clear, data-backed classification is available. • Relieved when reports can be generated quickly for stakeholders.
