Project Name	A comprehensive measure of well being
Maximum Marks	3 Marks

Project Executable Files

This section requires submission of all executable and deployable files for your project. Ensure all files are properly organized, named, and uploaded to the specified submission platform. The evaluator must be able to run or deploy your solution using the provided files and instructions.

Step 1: Submission Checklist

S.No	Item to Submit	Submitted (Yes/No/NA)
1	Complete source code (all files and folders)	Yes
2	README / Setup Guide (instructions to run the project)	Yes
3	requirements.txt / package.json / dependency file	Yes
4	Database schema / seed files (if applicable)	Yes
5	Environment configuration file (.env.example or similar)	Yes
6	Deployed application URL (if hosted)	Yes
7	APK / Executable binary (if applicable for mobile/desktop apps)	NA

8	Dockerfile / Containerization config (if applicable)	Yes
9	Test files and test results	Yes
10	Demo video or walkthrough (if required)	Yes

Step 2: File / Folder Structure

Provide an overview of your project's file and folder structure below:

```

/hdi-prediction-ml
  /src - Source code (API, ML model, preprocessing)
  /frontend - React dashboard (input form, charts, comparison view)
  /tests - Unit and load test files
  /docs - Documentation
  /config - Configuration files
  README.md - Setup and run instructions
  requirements.txt - Python dependencies  package.json
  - Frontend (Node) dependencies

```

Step 3: Deployment / Access Details

Field	Details
Hosted / Deployed URL	https://a-comprehensive-measure-of-well-being-3z6ysbscgmzrqzga4e5dnq.streamlit.app
Login Credentials (Demo)	NA-no login required,app is publicly accessible.
Platform / Hosting Provider	Stream Community Cloud
Repository Link	https://github.com/AddepalliAkshatha/A-Comprehensive-Measure-ofWell-Being.git
Demo Video Link	https://drive.google.com/drive/folders/A-Comprehensive-Measure-ofWell-Being-demo-video

Step 4: Run Instructions

Provide clear, step-by-step instructions for the evaluator to run your project locally:

```

Pre-requisites: Python 3.10+, Node.js 18+, PostgreSQL 14+

Step 1: Clone the repository: git clone https://github.com/PNT2026TMID18420/hdi-prediction-ml
Step 2: Install backend dependencies: pip install -r requirements.txt
Step 3: Configure environment: copy .env.example to .env and set DATABASE_URL
Step 4: Run database migrations: alembic upgrade head
Step 5: Start the API: uvicorn app:app --reload
Step 6: Install and start the frontend: cd frontend && npm install && npm start
Step 7: Open browser at http://localhost:3000

```

Step 5: Known Issues / Limitations

S.No	Known Issue / Limitation	Workaround / Status
1	Live UNDP/World Bank API sync is not yet automated	Manual CSV refresh works as a reliable workaround
2	Country comparison view is limited to 5 countries at once	Planned enhancement for the next release
3	Large CSV uploads (> 500 rows) may slow response times	Recommend splitting very large files into smaller batches
